LaunchLabZaio Bootcamp: WoBots Report
20 Jan 2020

Team member one: *Tshepiso Moloko*

Complete:
- Created modal or form in four sections
- Section1: Heading and page aligned with body(comfortable with tags)
- Section2: Using buttons and changing style. Yet complete modifying them instead of calling the individually
- Section3: Modifying the AddtoCart button and only managing to add a default button but styles not changing. All buttons only "behaving" in their default form not applying the styles
- Section4: Know that the function and element to use but that's icon only changes using javascript.
- Overall Assignment incomplete but uploaded with the comments of changes still being made

Planned to be complete:
- Modify labels to functions.
- Expected to be complete by 21/01/2020, 00:00

Challenges:
- Importing some of the css files and not entirely sure when they are called by the necessary file and how to check if they are called by the html file
- Using Heroku
- TIME was a huge factor in that being new to the language. Suggestion to have the calendar of the work that will be done provided before the Bootcamp starts.
- Limitations of some of the html elements led to duplicating like instead of calling one function the syntax used modifies each one of the elements individually.

Feelings about the process thus far:
- Team selection and grouping should be managed by the facilitators in order to have strong coding background to be paired with their weaker counterparts.
- A week was enough for me to get through the content online and understand features. But implementation takes longer. So researching, reading, watching online, practice and then implement was a lengthier process. Advice to have the calendar provided sooner in order to start reading up and youtube videos that are suggested beforehand.

Team member one: *Sesethu Tulumani*

Complete:
- Created my html and css page.
- Aligned my page in the centre.
- Scratched out the previous price and put a bold on the new price.
- Added ratings image next to the number of reviews and orders.
- Added the 'Add to cart' button.

- Linked the add to cart button to another page which I am currently making a pop up.

Planned to be completed:
Expected to upload completed assignment by Tuesday (21/01/2020)

Challenges:
Resources was a huge factor and model of the program being like school was a challenge

Feelings about the process thus far:
- Expected to learn something different from school.
- Intervals of lectures being on Monday is a challenge due to distance between residential area and the lab itself.
- Dependency to do the work individually like self-teaching style as opposed an on the job training since most of the work had already been covered at school.
- Pressure on submission since the time from was so limited.
- Wifi limitations and LaunchLab far from home.
- Feels like it's a competition

Team member one: *Ireen Semenya*

Complete:
- Managed to have the color changes feature.

Planned to be completed:
- Expected completion day for Week 1 Deliverable is Tuesday (21/01/2020)

Challenges:
- Script for the carts functionality
- Time was a factor but clearly communicated with the team clash of honors submission and that the first deliverable has been started (19/01/2020) and will be completed and uploaded.

Feelings about the process thus far:

OVERALL Feedback Group Feedback& Suggestions:
- Lack of communication and use of available resources by the group
- The capacity for team members to focus on this particular Bootcamp. Due to time when the program runs there's prone to be split focus within team due to other commitments at this time of the year.
  It could be advisable to have the program run on holidays.
- Team mates reluctant to use the self-teaching opportunity
